Youll need tó override your fórms CreateParams property, ánd set the CSN0CLOSE window class style.. Itll most likely place itself undér a strange namé somewhere in thé windows directory.. Task Manager can forcibly terminate a process that is not responding; it doesnt need the applications permission to close it, and it doesnt ask nicely, either..) Of course, this still wont stop one of the processes from being killed, it will just allow you to restart it.. So better yét, write your codé defensively: Save thé applications state só that it cán be closed and restored at will.. A masters studént learning Computer Applications belongs from Ránchi Here I writé tutorials related tó Python Programming Languagé.. For the récord, I wouldnt usé an application thát behaved like thát For example yóu could simply hóok the APIs taskmanagér uses to éither enumerate or kill the process..
